Writing

I think that the humanity went forward in many ways. Since the beginning of the 20th century many inventions, that were made, have changed our lives completely. I think that it's really hard to pick the most important from millions of inventions. All of them are really important every invention literally opens up a door for the next one.

In my personal opinion, the invention of the Internet is really important for our society. Maybe, lots of people waste time there, but there are so many possibilities. You can learn anything, without leaving your room. You can connect with people all over the world, people you could never heard about earlier. There's no boundaries in the communication anymore. On the other hand, we have to remember that there's a real life around us, and the Internet shouldn't become the most important thing in our lives.

To sum up, I have to say that, despite the fact our society has developed a lot, the most important inventions haven't done yet. There are so many problems, like bad ecology, wars, diseases, mental and physical. We should work on that problems to make our world a better place.
